1. Product description

1.1 What it is for

The Rotorama Battery Strap 10x130 is a strap with the Rotorama logo for securing the Li-Po flight battery to a quadcopter frame. It is tightened using a plastic buckle and hook-and-loop fastener.

Its length of 130 mm is suitable for securing smaller batteries on 2–3" quadcopters – the strap is threaded through both the top and bottom plates of the frame.

2. Use

2.1 Securing the battery

① Thread the free end of the strap through the slots in the top and bottom plates of the frame so that the buckle stays on one side of the frame.

② Place the battery on the frame and wrap the strap around it.

③ Pass the free end through the buckle, fold it back, pull the strap tight and press the hook-and-loop fastener together along its full length.

④ Check that the battery cannot slide or rotate on the frame.

⑤ Make sure that neither the free end of the strap nor the battery lead reaches into the path of the propellers.

※ A battery that is not tightened sufficiently can come loose or fall out in flight, damage the quadcopter and injure people. Check the mounting before every flight.

2.2 Checking and replacing the strap

- Before every flight, check that the hook-and-loop fastener holds well and that neither the strap nor the buckle is torn or cracked.
- **Replace a strap** with a worn hook-and-loop fastener, a torn strap or a cracked buckle – a damaged strap may not hold the battery in flight.
- The strap is intended only for securing a battery to a model. Do not use it for hanging or securing any other loads.
- Keep the hook-and-loop fastener free of dust, grass and dirt, which reduce its grip.

3. Information for the EU and Czech Market

3.1 Importer and responsible person in the EU

The product is placed on the European Union market by the importer stated below, who is at the same time the responsible person within the meaning of Article 16 of Regulation (EU) 2023/988 of the European Parliament and of the Council on general product safety (GPSR).
